

OUR INTEGRATION METHODOLOGY

When buying or selling it's hard to determine whether the business is worth it. Our due diligence phase coupled with the Operational Maturity level will make you confident in your decision.

DUE DILIGENCE:

The top question to answer during the due diligence phase - Is the business worth selling/buying?

Information Technology (IT) due diligence identifies risks of instability and opportunities to reduce costs while improving IT effectiveness. This is revealed by assessing several areas of the business.

MINIMIZE RISK, MAXIMIZE SYNERGIES

Synergy

Synergy may be **combined effort** and more than the sum of enhanced result of working together as cooperative interaction.

EQUILIBRIUM

IT SOLUTIONS, INC.

INTEGRATION/SEPARATION PLANNING:

As IT integrations and separations are complex and resource-intensive alignment with the overall business plan needs to be in place in order to keep things running efficiently. The appropriate integration/separation model is critical and needs to align with the M&A strategy. Determination of the future state needs to address how IT will operate on Day 1 to keep the business running.

INTEGRATION/SEPARATION EXECUTION:

To reach the future state effectively and efficiently an IT Program Management Office (PMO) will provide the necessary management of the overall integration and carveout activities, provides the day-to-day direction, drives the IT blueprint, work plan development and execution, common tools, templates, and playbooks for IT working teams to deliver and capture the identified synergies.
